

The testing items for the type classification

Type classification	Type of materials	Testing items
Paper	Paper	Heavy metals and physical test
Plastic	Plastic	Heavy metals, phthalates and physical test
Oher composite materials	Paper	Heavy metals and physical test
	Plastic(including paper with film for re-writing or glossy film)	Heavy metals, phthalates and physical test
	Oher composite materials(including commodity with coating)	Heavy metals and physical test

Note:

1. The designated testing laboratory chooses the most complexity design of commodity for each type classification to conduct testing. For the testing item with other composite materials, each testing item only test once. After sampling and mixing with each risk parts of the chose commodity,
2. For increasing the model or items in the List of Declaration of Conformity Type Classification Declaration, chooses the most complexity design of commodity for the increasing the items or other item without testing.
3. Type classification of toy commodities classified as paper or plastic which are major content or material with paper or plastic. If the toy commodities contain small amount of material without risk (such as book glue), it could be classified as paper. If there is more inquiry, the inspection obligatory applicant could submit the material evidence or photos with the small amount of toy commodity to the designated testing laboratory to classify.
